

Rollup Display Setup

Step 1: remove stand from soft case.

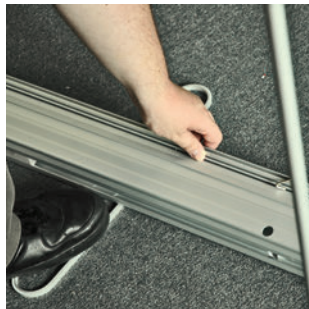

Step 2: remove support pole from stand and assemble the pole sections using shock cords.

Step 3: Rotate the two base feet perpendicular to stand, hold one stand foot down with your foot from behind the stand.

Step 5: Grasp graphic top bar and raise to waist level. Don't lift your foot!

Step 6: Insert top bar hook in top of pole.

Step 7: Raise graphic carefully with pole.

Step 8: insert pole bottom into hole at back of stand. Note that there is a second hole at the bottom of the stand to keep the pole and graphic from tipping forward.

Step 9 (optional light): Remove light from soft case, insert bi-pin bulb.

Step 10: Place light bracket on graphic support pole, aligning bracket slot with graphics bar hook.

To re-pack the light and stand, reverse the procedure above. If the graphics go in crooked and bind against an edge, pull the graphics partway out and re-roll them. Be careful rolling the graphics as they can be damaged if carried without fully retracting inside the stands.
